Fast, Reliable and Local Internet Service

We are a Local Business

With strong ties to the local community, we at AirLink are providing a valuable service for the community by offering fast, affordable and reliable high-speed internet. We are excited and proud to see local businesses and communities utilize our high-speed network to grow both personally and professionally. By selecting AirLink as your internet provider, you are not only supporting a growing local business, you are also supporting the community you live in through state and local taxes.

Advanced Services

Total Protection Plan

This protection plan guarantees your AirLink equipment in the event of mechanical or electrical breakdown, accidental damage, including liquid damage, lightning strike, or other events. **\$7.99/mo**

Public IP and Inbound Access

If you require a public IP (IPv4) address and inbound access to your home devices, such as security cameras, you will need to add this service to your account. All packages below will function normally for general internet use including streaming without this service. **\$15.00/mo**

Home Networking Services

Are you having trouble with a wireless device, desktop computer or tablet? We offer complete home networking services to keep all your devices connected. **\$75.00/hr**

Wireless Routers

High Performance Dual Band Routers

If you have more than 4 devices that will be connecting to your WiFi router, we offer a high performance (802.11ac) router that broadcasts in both 2.4GHz and 5GHz frequencies (Dual Band). **\$7.99/mo or purchase for \$130**

How it Works

To connect you to the internet, we install a small antenna on the roof of your home. The antenna is pointed to one of our local towers, establishing your AirLink internet connection. Your connection is always on and does not use a phone line or any Satellites. Your internet connection can be shared among multiple devices in your home by using a wireless router. Depending on your location and surroundings, professional installation can be as little as \$149.00

Installation

Standard Installation

Standard installation is an eave mount, J-pole or similar mounting device installed on the roof of your home. This installation includes a standard radio, mounting hardware and cable installed through an exterior wall. **\$149.00**

10-Foot Installation

A 10-foot installation may be required when trees or other obstacles interfere with reception. This 10-foot installation includes a roof mounted tripod, 10-foot pole, standard radio and cable installed through an exterior wall. **\$229.00**

20-Foot Installation

A 20-foot installation may be required when trees, hills or other obstacles prevent good reception. A 20-foot installation includes a roof mounted tripod, two 10-foot poles, three guy wires, guy station, anchor points, standard radio and cable installed through an exterior wall. **\$267.00**

30, 50 Foot Installations

In low lying areas or at greater distances from our towers, installation might require a height greater than 20 feet above the roof line. In this case, please contact us for a quote.

Selecting a Package

Basic Internet

AirLink's basic internet services are great for shopping, social media and general web browsing.

Streaming Video

Netflix recommends 3Mb for standard definition (480) and 5Mb for high definition (1080) streaming so that you can enjoy the show without buffering. If you want to use other devices at the same time while streaming, you might consider a higher package.

WiFi Router

The network cable we install in your home can be directly connected to a desktop, laptop, Smart TV, DVD player, Xbox, PlayStation and many other devices. However, if you would like to share the connection with multiple devices, you will need a wireless router.
